This is where it all starts. Learn these and the rest will be much easier: 1 = a 2 = two 3 = three 4 = four 5 = five 6 = six 7 = seven 8 = eight 9 = nine 2 Write numbers from 10 to 19. Do you see how many of them look like the numbers above, plus the teen at the end? Sixteen (16) means just six and ten (6 + 10). 10 = ten 11 = eleven 12 = twelve 13 = thirteen 14 = fourteen 15 = fifteen 16 = sixteen 17 = seventeen 18 = eighteen 19 = nineteen 3 Count in tens from 20 to 90. How to write 20, 30, 40 and so on all the way to 100. You can recognize these numbers because they end up in ty except 100). 20 = twenty 30 = thirty 40 = forty 50 = fifty 60 = sixty 70 = seventy 80 = eighty 90 = ninety 4 Combine words to write more numbers. Now you can type any number from 1 to 100. Let's see how it works for the number 42: 42 is written with two numbers: 4 2. 2 is in those place, so it's just equal to 2. Write this as two. 4 is in a tens place, so it's actually 40. Write this as forty. Write the two parts together: 42. Do not forget - the sign between them. 5 Count by hundreds. This part is easy if you remember the basics. Just type the number as usual and add a hundred: 100 = hundred 200 = two hundred 300 = three hundred (and so on) 6 Type any number from 100 to 999. Just write hundreds place, then the rest of the number. You don't have to write and or anything else between them. Here are some examples: 120 = one hundred twenty 405 = four hundred five 556 = five hundred fifty-five 999 = nine hundred nine-and-nine-nine 7 Test yourself. Try writing a few numbers as words. Work on these, then highlight the space after = characters to see if you're right: 21 = twenty-one 37 = 700 49 = forty-nine 255 = two hundred fifty-five 876 = eight hundred 76 1 Understand place values. We can tell you what each digit in a number means based on where it is. Here is what the first 9 place values are called:[1] 1 - them place. 10 - in the 10th place. 100 - hundreds in the hundreds. 1,000 - thousands. 10,000 - the ten thousand places. 100,000 - the hundreds of thousands 1000,000 - million. 10,000,000 - the 10 million. 100,000,000 - hundred million place. 2 Add commas to long numbers. Start from the right side of the number, on them place. Count three digits to the left, and then add a comma. Keep separating the number into groups of three. For example, turn 458735 to 458,735. Enter 1510800 as 1,510,800. Instead, you can use a period if that's how people in your country write numbers. 3 Enter the last two digits. Look at the two digits at the end of the number. This part is like typing a normal double-digit number. 5,467,350 looks hard, but don't worry. Start with only the 50 at the end. Write this as fifty. 4 Write hundreds place. The next digit is hundreds place. It's easy. Just type the number of the place, and then add the word a hundred. Write this in front of your number. In 5,467,350, they are 3 hundreds of places. Write this as 'three hundred. Now we have '350. 5 Look at the next bite of three. You just wrote the hundreds, tens, and them place. The next three figures are the thousands chunk. It's the hundreds of thousands, ten thousand and thousands. Type these the same way, and then add the word a thousand. [2] In 5,467,350, the 467 are the thousands. Write the 4 as four hundred. Write the 67 as sixty-seven. Write the entire chunk as 467,000. Now we have 467,000, 350. 6 Do the same for millions. The next bite of three figures is the millions. It's the hundreds of millions, ten million and a million. It's just the same as before, but with millions at the end. In 5,467,350, we only have a 5 of millions. Write this as five million. Finish write the number: five million, four hundred 67,000, three hundred fifty. Add new question question Am I correct if I write 350 as three hundred and fifty. Yes, this form is easy to understand. But as the above article explains, it can also be written as three hundred fifty. Question How do I write a number with a decimal in words?
